The following is a first action on the merits of application Serial No.10/680,003, filed October 7, 2003.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

Receipt is acknowledged of the Information Disclosure Statement filed October 7, 2003. The cited documents have been considered.

Allowable Subject Matter

Claims 1-4 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to show or render obvious a vehicular transmission equipped with a continuously variable ratio-change mechanism and a fixed ratio rotational transmission mechanism disposed in parallel with each other as defined in claim 1; and further including first and second frictionally engaging means and an engagement-controlling means wherein, when the transmission is switched from a

neutral mode to an in-gear mode, the engagement-controlling means, at first, brings into engagement one of the first and second frictionally engaging means that sets a power transmission through one of the continuously variable ratio-change mechanism and the fixed ratio rotational transmission mechanism whose speed change ratio is set to achieve a higher speed and, then, releases the one of the first and second frictionally engaging means and brings another of the first and second frictionally engaging means into engagement.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Frank('558), Kato et al.('617), Fujimoto et al.('993), Hoshiya et al.('114), and Fujimoto et al.('309) show other engagement controls for continuously variable transmissions.
